# CSE 253 Programming Assignment 1 – Logistic & Softmax Regression

---

**Anonymous Author(s)**

Affiliation

Address

email

## **Abstract**

- 1 The abstract paragraph should be indented 1/2 inch (3 picas) on both the left- and  
2 right-hand margins. Use 10 point type, with a vertical spacing (leading) of 11 points.  
3 The word **Abstract** must be centered, bold, and in point size 12. Two line spaces  
4 precede the abstract. The abstract must be limited to one paragraph.

5 **1 Derive the gradient for logistic regression**

6 **1.1 Problem abstract**

7 **1.2 Further discussion**

8 **1.2.1 Implementation**

9 **1.2.2 Discussion**

10 **1.2.3 Result**

11 **1.3 Epilogue**

12 **2 Derive the gradient for softmax regression**

13 **2.1 Problem abstract**

14 **2.2 Further discussion**

15 **2.2.1 Implementation**

16 **2.2.2 Discussion**

17 **2.2.3 Result**

18 **2.3 Epilogue**

19 **3 Read in data**

20 **3.1 Problem abstract**

21 **3.2 Further discussion**

22 **3.2.1 Implementation**

23 **3.2.2 Discussion**

24 **3.2.3 Result**

25 **3.3 Epilogue**

26 **4 Logistic regression via gradient descent**

27 **4.1 Problem abstract**

28 **4.2 Further discussion**

29 **4.2.1 Implementation**

30 **4.2.2 Discussion**

31 **4.2.3 Result**

32 **4.3 Epilogue**

33 **5 Regulation**

34 **5.1 Problem abstract**

35 **5.2 Further discussion**

36 **5.2.1 Implementation**

37 **5.2.2 Discussion**

38 **5.2.3 Result**

39 **5.3 Epilogue**

40 **6 Softmax regression via gradient descent**

52 <https://cmt.research.microsoft.com/NIPS2017/>

53 Please read carefully the instructions below and follow them faithfully.

## 54 10.1 Style

55 Papers to be submitted to NIPS 2017 must be prepared according to the instructions presented here.  
56 Papers may only be up to eight pages long, including figures. This does not include acknowledgments  
57 and cited references which are allowed on subsequent pages. Papers that exceed these limits will not  
58 be reviewed, or in any other way considered for presentation at the conference.

59 The margins in 2017 are the same as since 2007, which allow for  $\sim 15\%$  more words in the paper  
60 compared to earlier years.

61 Authors are required to use the NIPS  $\LaTeX$  style files obtainable at the NIPS website as indicated  
62 below. Please make sure you use the current files and not previous versions. Tweaking the style files  
63 may be grounds for rejection.

## 64 10.2 Retrieval of style files

65 The style files for NIPS and other conference information are available on the World Wide Web at

66 <http://www.nips.cc/>

67 The file `nips_2017.pdf` contains these instructions and illustrates the various formatting require-  
68 ments your NIPS paper must satisfy.

69 The only supported style file for NIPS 2017 is `nips_2017.sty`, rewritten for  $\LaTeX 2\epsilon$ . **Previous**  
70 **style files for  $\LaTeX 2.09$ , Microsoft Word, and RTF are no longer supported!**

71 The new  $\LaTeX$  style file contains two optional arguments: `final`, which creates a camera-ready copy,  
72 and `nonatbib`, which will not load the `natbib` package for you in case of package clash.

73 At submission time, please omit the `final` option. This will anonymize your submission and add  
74 line numbers to aid review. Please do *not* refer to these line numbers in your paper as they will be  
75 removed during generation of camera-ready copies.

76 The file `nips_2017.tex` may be used as a “shell” for writing your paper. All you have to do is  
77 replace the author, title, abstract, and text of the paper with your own.

78 The formatting instructions contained in these style files are summarized in Sections 11, 12, and 13  
79 below.

## 80 11 General formatting instructions

81 The text must be confined within a rectangle 5.5 inches (33 picas) wide and 9 inches (54 picas) long.  
82 The left margin is 1.5 inch (9 picas). Use 10 point type with a vertical spacing (leading) of 11 points.  
83 Times New Roman is the preferred typeface throughout, and will be selected for you by default.  
84 Paragraphs are separated by  $\frac{1}{2}$  line space (5.5 points), with no indentation.

85 The paper title should be 17 point, initial caps/lower case, bold, centered between two horizontal  
86 rules. The top rule should be 4 points thick and the bottom rule should be 1 point thick. Allow  $\frac{1}{4}$  inch  
87 space above and below the title to rules. All pages should start at 1 inch (6 picas) from the top of the  
88 page.

89 For the final version, authors’ names are set in boldface, and each name is centered above the  
90 corresponding address. The lead author’s name is to be listed first (left-most), and the co-authors’  
91 names (if different address) are set to follow. If there is only one co-author, list both author and  
92 co-author side by side.

93 Please pay special attention to the instructions in Section 13 regarding figures, tables, acknowledg-  
94 ments, and references.

## 95 **12 Headings: first level**

96 All headings should be lower case (except for first word and proper nouns), flush left, and bold.

97 First-level headings should be in 12-point type.

### 98 **12.1 Headings: second level**

99 Second-level headings should be in 10-point type.

#### 100 **12.1.1 Headings: third level**

101 Third-level headings should be in 10-point type.

102 **Paragraphs** There is also a `\paragraph` command available, which sets the heading in bold, flush  
103 left, and inline with the text, with the heading followed by 1 em of space.

## 104 **13 Citations, figures, tables, references**

105 These instructions apply to everyone.

### 106 **13.1 Citations within the text**

107 The `natbib` package will be loaded for you by default. Citations may be author/year or numeric, as  
108 long as you maintain internal consistency. As to the format of the references themselves, any style is  
109 acceptable as long as it is used consistently.

110 The documentation for `natbib` may be found at

111 `http://mirrors.ctan.org/macros/latex/contrib/natbib/natnotes.pdf`

112 Of note is the command `\citet`, which produces citations appropriate for use in inline text. For  
113 example,

114 `\citet{hasselmo}` investigated\dots

115 produces

116 Hasselmo, et al. (1995) investigated...

117 If you wish to load the `natbib` package with options, you may add the following before loading the  
118 `nips_2017` package:

119 `\PassOptionsToPackage{options}{natbib}`

120 If `natbib` clashes with another package you load, you can add the optional argument `nonatbib`  
121 when loading the style file:

122 `\usepackage[nonatbib]{nips_2017}`

123 As submission is double blind, refer to your own published work in the third person. That is, use “In  
124 the previous work of Jones et al. [4],” not “In our previous work [4].” If you cite your other papers  
125 that are not widely available (e.g., a journal paper under review), use anonymous author names in the  
126 citation, e.g., an author of the form “A. Anonymous.”

### 127 **13.2 Footnotes**

128 Footnotes should be used sparingly. If you do require a footnote, indicate footnotes with a number<sup>1</sup>  
129 in the text. Place the footnotes at the bottom of the page on which they appear. Precede the footnote  
130 with a horizontal rule of 2 inches (12 picas).

---

<sup>1</sup>Sample of the first footnote.

Table 1: Sample table title

Part		
Name	Description	Size ( $\mu\text{m}$ )
Dendrite	Input terminal	$\sim 100$
Axon	Output terminal	$\sim 10$
Soma	Cell body	up to $10^6$

131 Note that footnotes are properly typeset *after* punctuation marks.<sup>2</sup>

### 132 13.3 Figures

133 All artwork must be neat, clean, and legible. Lines should be dark enough for purposes of reproduction.  
 134 The figure number and caption always appear after the figure. Place one line space before the figure  
 135 caption and one line space after the figure. The figure caption should be lower case (except for first  
 136 word and proper nouns); figures are numbered consecutively.

137 You may use color figures. However, it is best for the figure captions and the paper body to be legible  
 if the paper is printed in either black/white or in color.

Figure 1: Sample figure caption.

138

### 139 13.4 Tables

140 All tables must be centered, neat, clean and legible. The table number and title always appear before  
 141 the table. See Table 1.

142 Place one line space before the table title, one line space after the table title, and one line space after  
 143 the table. The table title must be lower case (except for first word and proper nouns); tables are  
 144 numbered consecutively.

145 Note that publication-quality tables *do not contain vertical rules*. We strongly suggest the use of the  
 146 booktabs package, which allows for typesetting high-quality, professional tables:

147 <https://www.ctan.org/pkg/booktabs>

148 This package was used to typeset Table 1.

## 149 14 Final instructions

150 Do not change any aspects of the formatting parameters in the style files. In particular, do not modify  
 151 the width or length of the rectangle the text should fit into, and do not change font sizes (except  
 152 perhaps in the **References** section; see below). Please note that pages should be numbered.

---

<sup>2</sup>As in this example.

## 15 Preparing PDF files

Please prepare submission files with paper size “US Letter,” and not, for example, “A4.”

Fonts were the main cause of problems in the past years. Your PDF file must only contain Type 1 or Embedded TrueType fonts. Here are a few instructions to achieve this.

- You should directly generate PDF files using `pdflatex`.
- You can check which fonts a PDF file uses. In Acrobat Reader, select the menu Files>Document Properties>Fonts and select Show All Fonts. You can also use the program `pdf fonts` which comes with `xpdf` and is available out-of-the-box on most Linux machines.
- The IEEE has recommendations for generating PDF files whose fonts are also acceptable for NIPS. Please see <http://www.emfield.org/icuwb2010/downloads/IEEE-PDF-SpecV32.pdf>
- `xfig` “patterned” shapes are implemented with bitmap fonts. Use “solid” shapes instead.
- The `\bbold` package almost always uses bitmap fonts. You should use the equivalent AMS Fonts:

```
\usepackage{amsfonts}
```

followed by, e.g., `\mathbb{R}`, `\mathbb{N}`, or `\mathbb{C}` for  $\mathbb{R}$ ,  $\mathbb{N}$  or  $\mathbb{C}$ . You can also use the following workaround for reals, natural and complex:

```
\newcommand{\RR}{\mathbb{R}} %real numbers
\newcommand{\Nat}{\mathbb{N}} %natural numbers
\newcommand{\CC}{\mathbb{C}} %complex numbers
```

Note that `amsfonts` is automatically loaded by the `amssymb` package.

If your file contains type 3 fonts or non embedded TrueType fonts, we will ask you to fix it.

### 15.1 Margins in L<sup>A</sup>T<sub>E</sub>X

Most of the margin problems come from figures positioned by hand using `\special` or other commands. We suggest using the command `\includegraphics` from the `graphicx` package. Always specify the figure width as a multiple of the line width as in the example below:

```
\usepackage[pdftex]{graphicx} ...
\includegraphics[width=0.8\linewidth]{myfile.pdf}
```

See Section 4.4 in the `graphics` bundle documentation (<http://mirrors.ctan.org/macros/latex/required/graphics/grfguide.pdf>)

A number of width problems arise when L<sup>A</sup>T<sub>E</sub>X cannot properly hyphenate a line. Please give LaTeX hyphenation hints using the `\-` command when necessary.

### Acknowledgments

Use unnumbered third level headings for the acknowledgments. All acknowledgments go at the end of the paper. Do not include acknowledgments in the anonymized submission, only in the final paper.

### References

References follow the acknowledgments. Use unnumbered first-level heading for the references. Any choice of citation style is acceptable as long as you are consistent. It is permissible to reduce the font size to `small` (9 point) when listing the references. **Remember that you can go over 8 pages as long as the subsequent ones contain *only* cited references.**
